

Proofreading Exercise

- (a) **OVERALL RISK AND RATIONALE-** The baseline risk rating; based on factors 1 and 3 starts at M and is raised to H because of the following. F's D&A use, the death of the mgm which causes stress in the home, and whether or not to move. In the event that the family don't move, the condition of the home leads one to the conclusion that the children may not be unable to have their own rooms. Its obvious form the volital combonations of factors combined with the child's age / vulnerability create a situation where the risk is higher then if mother had taken the apartment she could of gotten earlier.
- (b) **Face* to* face contact** with M, the child, and pgm, the owner of the home. She advised that the AP of the incident was not Bill. CW advised that although it may not seem to be the case, CYS was interested in getting to the bottom of the abuse. Finally M walked to the kitchen and returned with a bunch of papers from her attorneys office. It had the appearance of someone who had hoped to create a diversion. She then said to me I should of been there earlier, her attorney was at the house. I advised M that she would do well to contact him before the issues progressed to the next higher level.
- (c) Wherefore you're petitioner pray this Honorable Court make a determination concerning the safety of the child in his home, whether or not custody is needed, if the child should be placed in a group home, and Billys Independent Living.
- (d) Dear Mr. Shaw, Mr. Laprenski, and Dawn:

Recently its come to the attention of XCCYS that a very large number of contracted services paperwork requirements are not being addressed appropriately by the staff. We have the feeling that this might then result in a DPW audit hit, some of which we can hardly afford not to address. In the event that this occurs we'll take steps to assure the provision of adequate services in their entirety.

I hope that you can appreciate our position in this most delicate of matters. Surely you'd be so inclined if the shoe were on the other foot. Irregardless, its our position that even if this hadn't been caught earlier, we're able to correct it now.

Hopping for a quick solution –

Richard Cunnigham
